

Nights spent at tourist accommodation establishments

[REMOVE](#) [1]

The indicator measure the number of nights spent at establishments intended to shelter tourists. "A tourist accommodation establishment is defined as any facility that regularly or occasionally provides short-term accommodation for tourists as a paid service (although the price might be partially or fully subsidised)."

[Rolling Review: Tourism Statistics](#) [15]

Contribution to the green economy:

A general increase in tourism activity is seen as positive for progress in competitiveness and employment, as well as positive spillovers in green fiscal policies. It may or may not also correlate with growth in eco-tourism. However, for the purpose of the green economy eco-tourism is preferred over traditional tourism.

Cost of accessing data:

- [free of charge](#) [16]

Potential misinterpretation: Tourism intensity may have had significant increases -- even causing overcapacity in accommodation in some years -- but the underlying number of tourist trips meeting ecologically sensitive criteria is unknown.

Related Indicator: [Penetration of tourist eco-labels](#) [17]

Potential misinterpretation: Increase in accommodation statistics does not necessarily indicate positive economic benefits for the country under study if the trip/nights spent is considered "outbound tourism." The receiving country reaps the benefits.

Related Indicator: [Tourism contribution to GDP](#) [18]

Use of indicator in mandates, international agreements or legislation:

Name of agreement or policy:

ICT & Tourism Initiative

Name of body or organisation:

European Commission
